

WOUND CARE

DOCTOR'S CHOICE
— HOME CARE —

To meet patients' needs, there is a team of nurses who specialize in wound care. Wound care nurses visit patients' homes to monitor wounds closely and to ensure they are improving.

IN-HOME QUALIFYING WOUND CARE NEEDS:

- Non-healing wounds
- Wounds that fail to progress over a two week period
- When wounds have progressed and need a new treatment plan
- Complex wound care needs
- New Stage III and IV pressure ulcers
- Preventative skin measures: appropriate support surface, moisture management
- Ostomy wound care
- Assessing, evaluating and identifying patients who are at risk or need treatment for:
 - Pressure ulcers
 - Burns
 - Surgical wounds
 - Trauma
 - Lower legs (diabetic, venous and arterial)
- Wound care management
- Specialized treatment plan

Wound care nurses offer education in the home to help patients or caregivers take care of wounds and change dressings.

Our goal is to optimize our patient's healing time and promote the best possible health outcomes. Our staff is highly trained and utilizes cost-effective and clinically proven products to make certain our patients are receiving superior care.
